There is an extensive body of research on glyphosate and glyphosate-based herbicides, including more than 800 rigorous registration studies required by EPA, European and other regulators, that confirms that these products are safe when used as directed.

Glyphosate has been a breakthrough for farming. Not only do glyphosate products work well to control problematic weeds, but they also help farmers grow crops more sustainably. Over the last many years, farmers, governments, gardeners, and other users have depended on glyphosate as an efficient and cost-effective tool. Like all pesticides, regulatory authorities around the world routinely review the latest safety data on glyphosate and approved glyphosate-based products on this basis.

In India, Roundup®, one of the many glyphosate-based herbicides marketed in India by over 50 players, has been approved by the regulators for use in non-cropped areas, tea plantations and for pre-planting of paddy. Farmers today require the best products and techniques to overcome challenges in their fields and the arbitrary decisions by some states in India to restrict the usage of glyphosate is against the interests of farmers utilizing the product for weed control. Such actions will only aid in significantly increasing farmers’ cost of cultivation. As for product liability lawsuits involving Roundup®, we are currently not aware of any such litigation having arisen in India. As a responsible entity, we continue to engage with the various stakeholders to inform about the safety of glyphosate and advocate for the best interests of farmers.

## APPROACH - BASIS OF MERGER

The proposed Scheme of Amalgamation contemplates the merger of MIL into BCSL. Arriving at the fair exchange ratio for the Proposed Merger of MIL into BCSL would require determining the relative value of the equity shares of MIL and BCSL. These values are to be determined independently, but on a relative basis for the Companies, without considering the effect of the Proposed Merger. Our valuation is based on the premise of going concern.

There are several commonly used and accepted methods under the market, income and asset approaches for determining the fair exchange ratio for the Proposed Merger of MIL into BCSL, which have been considered in the present case, to the extent relevant and applicable, and subject to availability of information, including:

1. Net Asset Value method
2. Discounted Cash Flow method
3. Comparable Companies' Multiples method
4. Market Price method

It should be understood that the valuation of any company or its assets is inherently subjective and is subject to certain uncertainties and contingencies, all of which are difficult to predict and are beyond our control. In performing our analysis, we made numerous assumptions with respect to industry performance and general business and economic conditions, many of which are beyond the control of the Companies. In addition, this valuation will fluctuate with changes in prevailing market conditions, the conditions and prospects, financial and otherwise, of the Companies, and other factors which generally influence the valuation of the Companies.

The application of any particular method of valuation depends on the purpose for which the valuation is done. Although different values may exist for different purposes, it cannot be too strongly emphasized that a valuer can only arrive at one value for one purpose. Our choice of methodology of valuation has been arrived at using usual and conventional methodologies adopted for mergers of a similar nature and our reasonable judgment, in an independent and bona fide manner based on our previous experience of assignments of a similar nature.

### Net Asset Value ("NAV") Method

The asset based valuation technique is based on the value of the underlying net assets of the business, either on a book value basis or realizable value basis or replacement cost basis. The Net Asset Value ignores the future return the assets can produce and is calculated using historical accounting data that does not reflect how much the business is worth to someone who may buy or invest in the business as a going concern. This valuation approach is mainly used in case where the firm is to be liquidated i.e. it does not meet the "going concern" criteria or in case where the assets base dominate earnings capability. A scheme of amalgamation would normally be proceeded with, on the assumption that the companies amalgamate as going concerns and an actual realization of the operating assets is not contemplated. The operating assets have therefore been considered at their book values. In a going concern scenario, the relative earning power, as reflected under the Income and Market approaches, is of greater importance to the basis of amalgamation, with the values arrived at on the net asset basis being of limited relevance. Therefore, we have not used the NAV Method for valuation.

### Discounted Cash Flows ("DCF") Method

Under the DCF method the projected free cash flows to the equity shareholders are discounted at the cost of equity. The sum of the discounted value of such free cash flows is the value of the firm for equity shareholders.

Using the DCF analysis involves determining the following:

*Estimating future free cash flows:*

Free cash flows are the cash flows expected to be generated by the company that are available to the providers of the company's equity capital.

*Appropriate discount rate to be applied to cash flows i.e. the cost of equity:*

This discount rate, which is applied to the free cash flows, should reflect the opportunity cost to the equity capital providers (namely equity shareholders). The opportunity cost to the equity capital provider equals the rate of return the equity capital provider expects to earn on other investments of equivalent risk.

BCSL and MIL are listed entities and information related to future profit and loss account, balance sheet and cash flows is price sensitive. In light of the above, we were not provided with the projections of the Companies by their respective management. We have therefore, not used this method for the valuation exercise.

**Comparable Companies' Multiple ("CCM") method**

Under this method, value of equity shares of a company is arrived at by using multiples derived from valuations of comparable companies, as manifest through stock market valuations of listed companies. This valuation is based on the principle that market valuations, taking place between informed buyers and informed sellers, incorporate all factors relevant to valuation. Relevant multiples need to be chosen carefully and adjusted for differences between the circumstances.

We have considered Enterprise value to Earnings before interest, tax, depreciation and amortization (EV/EBITDA) multiple of the comparable listed companies for the purpose of our valuation. The total equity value is then divided by the total number equity shares for arriving at the value per equity share of the Companies under CCM method.

**Market Price Method**

The market price of an equity share as quoted on a stock exchange is normally considered as the value of the equity shares of that company where such quotations are arising from the shares being regularly and freely traded in, subject to the element of speculative support that may be inbuilt in the value of the shares. But there could be situations where the value of the share as quoted on the stock market would not be regarded as a proper index of the fair value of the share especially where the market values are fluctuating in a volatile capital market. Further, in the case of a merger, where there is a question of evaluating the shares of one company against those of another, the volume of transactions and the number of shares available for trading on the stock exchange over a reasonable period would have to be of a comparable standard.

In the present case, the equity shares of both the Companies are traded on BSE and NSE. In these circumstances, the share price observed on NSE for the respective Companies over a reasonable period have been considered for arriving at the value per equity share of the Companies under the market price method.

**MAJOR FACTORS THAT WERE TAKEN INTO ACCOUNT DURING THE VALUATION**

- Key operating / financial parameters of the Companies vis-à-vis its comparable companies.

## BASIS OF FAIR EXCHANGE RATIO

The basis of the Proposed Merger of MIL into BCSL would have to be determined after taking into consideration all the factors and methods mentioned hereinabove. Though different values have been arrived at under each of the above methods, for the purposes of recommending the fair exchange ratio of equity shares it is necessary to arrive at a final value for each of the Companies' shares. It is however important to note that in doing so, we are not attempting to arrive at the absolute equity values of the Companies, but at their relative values to facilitate the determination of the fair exchange ratio. For this purpose, it is necessary to give appropriate weights to the values arrived at under each approaches / methods.

The fair exchange ratio has been arrived at on the basis of a relative equity valuation of the Companies based on the various approaches / methods explained herein earlier and various qualitative factors relevant to each company and the business dynamics and growth potentials of the businesses of the Companies, having regard to information base, key underlying assumptions and limitations.

Valuers, have independently applied methods discussed above, as considered appropriate, and arrived at their assessment of value per share of the Companies. To arrive at the consensus on the fair exchange ratio for the Proposed Merger, suitable minor adjustments / rounding off have been done in the values arrived at by the Valuers.

The computation of fair exchange ratio as derived by BSM is tabulated below:

Valuation Method	BCSL		MIL	
	Value per Share (INR)	Weight	Value per Share (INR)	Weight
Net Asset Value Method	NA	NA	NA	NA
Market Price Method	4,203.5	50%	2,717.5	50%
Comparable Companies Multiples Method (based on Earnings)	4,222.1	50%	2,827.1	50%
Relative Value per Share	4,212.8		2,772.3	
Fair Exchange Ratio (rounded)			2:3	

The computation of fair exchange ratio as derived by SRBC is tabulated below:

Valuation Method	BCSL		MIL	
	Value per Share (INR)	Weight	Value per Share (INR)	Weight
Net Asset Value Method	575.1	0%	373.2	0%
Market Price Method	4,203.5	50%	2,717.5	50%
Comparable Companies Multiples Method (based on Earnings)	4,078.6	50%	2,818.6	50%
Relative Value per Share	4,141.1		2,768.0	
Fair Exchange Ratio (rounded)			2:3	

In light of the above, and on a consideration of all the relevant factors and circumstances as discussed and outlined hereinabove, we recommend the following fair exchange ratio for the Proposed Merger of MIL into BCSL:

2 (Two) equity shares of BCSL of INR 10/- each fully paid up for every 3 (Three) equity shares of MIL of INR 10/- each fully paid up.
